

GENERATOR

Due to the observed increase in the number of people suffering from Covid 19 and people in selfisolation and the appearance of concrete examples of stigmatization, discrimination and violations of their rights in Osijek-Baranja and Vukovar-Srijem counties, the project will take urgent measures to inform citizens about people suffering from Covid 19 and people in self-isolation.

We will organize a mobile team for dialogue, developing empathy, breaking down prejudices and calling for solidarity and assistance to sick fellow citizens, from September to November 2020, in order to preserve social cohesion and emotional health of sick people and prevent discriminatory behavior of communities and individuals.

The direct beneficiaries of the project are the general population of citizens of local communities in which the number of people suffering from Covid 19 or people in self-isolation occurs or increases, and who themselves do not belong to this vulnerable group. After the interventions of the mobile team, we expect more significant mobilization of the target group where citizens will replace stereotypes and prejudices with empathy and responsibility and will activate and show solidarity by acting properly and providing various forms of assistance to patients and people in self-isolation.

The indirect target group of the project are people with Covid 19 and people in self-isolation who will be indirectly affected by the project by preventing discriminatory and stereotypical patterns of behavior and attitudes of the general population and providing the necessary assistance to achieve effects: maintaining mental health, lack of stigma, discrimination and human rights violations.

The Generator will take on the role of coordinating the project and the activities of the mobile team, and the partner organization NDC will conduct consulting and supervision of project implementation.
